

CYA and WS Website Rebuild Developer Brief

Website Rebuild Brief: Corporate Yoga Australia & CYA Wellbeing Studio

Prepared for: the developer(s) rebuilding corporateyoga.com.au and wellbeingstudio.com.au

Prepared by: Claude, in Cowork mode, for Glenn Hammond

Date: 25 July 2026

Source material: live audit of both current sites (25 July 2026) plus the accompanying strategic analysis, *Kinex Health vs Corporate Yoga Australia & CYA Wellbeing Studio*

This brief translates that research into build requirements. It assumes the developer has not read the strategic report, so context is included, but the emphasis here is on architecture, content structure, functionality and technical requirements rather than market strategy.

1. Project context, in one paragraph

Corporate Yoga Australia (CYA) is a decade-plus-old, national, B2B workplace wellbeing business (yoga, Pilates, meditation, retreats, corporate programs), currently on Squarespace. CYA Wellbeing Studio (WS) is a related online membership product, currently a single-page, unindexed, pre-launch marketing site built in React/Vite and hosted on Vercel, with no content connection back to the main brand. Both are being rebuilt. The two sites currently operate as if unrelated to each other; the single most important architectural decision in this rebuild is fixing that.

2. Current-state audit (what the new build must fix)

This is a working punch list, drawn directly from the live sites as at 25 July 2026. Treat every row as a requirement, not just an observation.

2.1 corporateyoga.com.au (current: Squarespace)

Issue found	Detail	Fix required
Broken/misleading URL	<code>/services</code> does not serve a services overview, it silently renders the <code>/movement</code> page	Build a real services overview page at a clean URL, or remove the link if it's redundant with the main nav

Issue found	Detail	Fix required
Duplicate gated page	/online-wellbeing-landing-page exists, is password-protected, and is a separate landing page for the same product as /online-wellbeing	Decide whether this is a live A/B or sales-only asset; either retire it or fold its purpose into the new WS site
Two disconnected form systems	Native Squarespace form (general contact) vs a separate HubSpot form (share.hsforms.com/...) used only on /online-wellbeing	Standardise on a single form/CRM system sitewide (see Section 6)
Inconsistent CTAs	"Book a Free Consultation," "Request pricing & info," "Enquire Now," "Request Program Details" all appear as separate labels pointing to different destinations	Reduce to one primary CTA pattern per page type, consistently labelled
Content inconsistency: founding date	About page states "since 2014" and also "began in Sydney in 2001"	Resolve with the client before final copy is written; use one date consistently everywhere
Content inconsistency: membership cadence	The Online Wellbeing membership is described as "Mindful Monday / Wellness Wednesday / Feel-Good Friday" on some pages and "Mindful Mondays / Thriving Thursdays / Feel Good Friday" on others, with different durations	Confirm the current, correct schedule with the client and use it verbatim across every page and both sites
Client logo/testimonial mismatches	Several logos and quote attributions don't match (a "Google" image file is actually the eBay logo; "Emporium Hotels" logo has alt text reading "Superior Hotels"; a quote about a sleep session is paired with an unrelated logo)	Full logo/testimonial audit required before migration, see Section 8.1
Unverified/improbable logos	"Bank of America" and "Barbie" appear as client logos with no supporting testimonial or context	Confirm with client whether genuine; remove if not verifiable
Duplicated FAQ content	Near-identical FAQ blocks repeated across /movement , /meditation-mindfulness , /personalised-wellbeing-programs , /contact	Consolidate into a single FAQ component/page, reference from other pages rather than duplicating copy
Leftover e-commerce plumbing	A stray /cart link appears in the header on every page (inherited Squarespace commerce feature with no live product catalogue behind it)	Remove entirely unless a real storefront (e.g. the B2C membership tier, Section 5) is being built
No pricing anywhere	No service, package or membership price is published	New IA must support at least indicative entry-

Issue found	Detail	Fix required
		level pricing (Section 4)
No case studies	Only short, unattributed or thinly-attributed pull-quotes exist; no long-form case study for any client	New template required (Section 4.1)
No accreditation/insurance display	No Yoga Australia/Yoga Alliance-style badge or liability insurance figure shown, unlike at least one direct competitor	New component required in footer or About page
No careers/partner pathway	No page exists for prospective facilitators or partners, despite the business running on a contractor facilitator network	New pages required (Section 4.1)
Unverifiable social proof	Facebook page shows "Not yet rated (0 reviews)"; no confirmed Google Business Profile	Build in a reviews component now so it's ready to populate (Section 8.3)

2.2 wellbeingstudio.com.au (current: React/Vite SPA on Vercel)

Issue found	Detail	Fix required
Not indexed by Google	A <code>site:wellbeingstudio.com.au</code> search returns zero results	New build must be crawlable (see Section 9 on rendering strategy) and submitted to Search Console
No page metadata	Browser tab shows the raw dev project name "wellbeing-studio-site"; no <code><meta name="description"></code> exists	Every page needs a proper title tag and meta description
Single page only	Confirmed via direct navigation: <code>/pricing</code> and <code>/about</code> both return genuine Vercel 404s. Nav items (Platform, Practice library, Resources, Request a demo) are all anchor links on one page	Rebuild as a proper multi-page site (sitemap in Section 5)
No cross-linking with CYA	Zero links in either direction between the two domains	Both new builds must cross-link persistently (Section 3)
No pricing	Nothing published; only a "Request a demo" lead form	New IA must support at least one visible price point for the individual tier (Section 5)
No instructor identity	No names, photos or bios anywhere	New IA must include instructor profiles (Section 5)

Issue found	Detail	Fix required
No proof of any kind	No testimonials, logos, case studies or reviews	New IA must include a proof/testimonials section, populated from CYA's audited, verified set (Section 8.1)
No blog/content	The "Resources" nav item is just an anchor to a section of the homepage	New IA should include a genuine resource/content area (Section 5)
Unclear booking backend	The lead form's submission handler is client-side JS with no visible third-party booking platform	Developer to confirm/replace with a proper backend (form handler + CRM, Section 6)
No login/member area	Live sessions and on-demand library are described but not gated or deliverable through any visible member system	This must be designed and built from scratch (Section 5 and Section 7)

3. The core architectural decision: how CYA and WS relate

Right now the two properties behave as unrelated businesses online, despite being one ecosystem in reality. The rebuild should fix this without merging them into a single undifferentiated site, they serve different buying moments (CYA = the full-service national brand and sales entry point; WS = the recurring-revenue membership product, sold both to companies as a value-add and, eventually, to individuals directly).

Recommendation: two connected sites, one shared identity system.

- Keep corporateyoga.com.au and wellbeingstudio.com.au as separate domains (this preserves WS's ability to feel like a distinct, focused product and to run its own conversion-optimised funnel, similar to how Kinex Health runs a separate funnel subdomain from its main brand site).
- Add a persistent link from CYA's main navigation and footer to WS ("Wellbeing Studio" or "Online Membership").
- Add a persistent "Part of Corporate Yoga Australia" link/badge in WS's header or footer, linking back to CYA.
- Share one visual design system (same type, colour and component library) across both, so a visitor recognises them as one brand even while browsing two domains.
- Share one CRM/analytics backend (Section 6) so a lead captured on either site is visible in one place and can be routed to the right sales or membership workflow.
- If a login/member system is built for WS (Section 7), design the account/auth layer so it could, in future, also authenticate corporate HR clients wanting to see

participation reporting for their own organisation, without needing a second, separate system.

Alternative considered and not recommended: merging WS into a `/studio` or `/membership` subdirectory of the main CYA site. This would fix the disconnection problem but would blur WS's ability to run as a focused, high-intent B2B funnel (the pattern Kinex Health uses effectively) and would complicate adding B2C individual signup later. Only choose this path if there are compelling technical or budget reasons to run one codebase instead of two.

4. corporateyoga.com.au: recommended sitemap

Page	Purpose	Key content blocks	Primary CTA	Priority
Home	First impression, credibility, route to the right offer	Hero with clear value proposition; audited client-logo strip; "what we offer" summary (3 cards linking to service pages); proof strip (reviews/testimonials, once populated); link to Wellbeing Studio; founder introduction	"Talk to us about your team"	MVP
About	Trust and credibility	Founder bio (Debby Lewis); national facilitator map/list by state; company history (one resolved, consistent founding date); accreditation & insurance block; awards	Enquiry form	MVP
Services overview	Replace the current broken <code>/services</code> redirect	Genuine summary of all service lines with links to detail pages	Enquiry form	MVP
Movement (service detail)	Yoga, Pilates, desk/office stretch, tailored movement	Format list, FAQ (deduplicated, single source), photography	Enquiry form	MVP
Meditation & Mindfulness (service detail)	Guided meditation, breathwork, sound baths, courses	As above	Enquiry form	MVP

Page	Purpose	Key content blocks	Primary CTA	Priority
Personalised Wellbeing Programs	Retreats, Lunch & Learn library, wellbeing days/events	Program list, sample itinerary/case reference, retreat gallery	Enquiry form	MVP
Packages/Pricing	New page; currently doesn't exist	Named, tiered packages (e.g. Foundation / Growth / Partner) with at least an indicative starting price on the smallest tier; larger tiers "custom quote"	"Get a tailored quote"	Phase 2 (see strategic report Section 12.9)
Case studies	New page; currently doesn't exist	2–3 full, permission-checked case studies with named client, challenge, approach, outcome	Enquiry form	Phase 2
Wellbeing Studio (cross-link page)	Bridge to the membership product	Short explainer + link through to wellbeingstudio.com.au	Link to WS	MVP
Blog / Resources	Content marketing, SEO	Category-tagged articles, consistent monthly cadence, author bylines	Newsletter signup	MVP (existing content migrates, cadence to be maintained)
2026 Wellbeing Calendar (lead magnet)	Currently referenced but has no real landing page	Dedicated download page with a proper email-capture form	Download after email capture	MVP fix
Partner with us	New page; currently doesn't exist	Explains referral/partnership opportunities (property managers, insurers, other wellbeing providers)	Partner enquiry form	Phase 2
Join our facilitator network	New page; currently doesn't exist	Explains the contractor facilitator model, states, expectations	Facilitator application form	Phase 2
Contact	Direct enquiry	Single consistent form (see Section 6), phone, email, social links, embedded reviews if available	Submit enquiry	MVP

Page	Purpose	Key content blocks	Primary CTA	Priority
Privacy policy / Terms	Legal	Standard content, updated for any new data collection (pulse surveys, membership accounts)	N/A	MVP

4.1 Notes for specific pages

- **Client logo strip (Home, About):** must only include logos that have been verified with the client as genuine, current or past clients, with permission to display. Do not migrate the current logo set as-is; treat Section 2.1's flagged mismatches as blockers, not cosmetic issues.
- **Case studies:** build as a repeatable content type/template (client name, sector, challenge, approach, outcome, quote, logo) so new ones can be added without developer involvement once the CMS is in place.
- **Packages/Pricing:** build pricing as structured content (a simple table or card component with name, price, inclusions, CTA) so it's easy for the client to update tier pricing without a code change.

5. wellbeingstudio.com.au: recommended sitemap

WS needs to grow from one landing page into a proper product site that supports three distinct visitor types: an HR buyer evaluating it for their company, an existing corporate client's employee who already has access, and (in a later phase) an individual consumer signing up directly.

Page	Purpose	Key content blocks	Primary CTA	Priority
Home	Explain the product, route each visitor type	Hero ("Work Wellbeing, Built Into Every Workday"); how it works (live + on-demand); instructor highlights; testimonials/proof; "for companies" vs "for individuals" split; link back to corporateyoga.com.au	"Book a walkthrough" (B2B) / "Start your free trial" (B2C, phase 2)	MVP
How it works / Platform	Detail the product mechanics	Live session schedule (Mindful Monday, Thriving Thursday, confirmed times/durations), on-	Request a demo	MVP

Page	Purpose	Key content blocks	Primary CTA	Priority
		demand library structure, monthly theme explanation, participation reporting explainer		
Practice library (preview)	Show the content quality to a non-member	A small, genuinely free preview sample of on-demand content; full library gated behind login	Sign up / Request a demo	MVP
Instructors	Build trust and personality, currently completely absent	Named instructor bios and photos, ideally linked to the same facilitators shown on CYA's About page	N/A	MVP
Pricing / Membership plans	Currently doesn't exist at all	Company/team plans (link through to CYA sales) and, once ready, an individual plan with a real price	"Talk to sales" / "Join now"	MVP for company plan framing; individual pricing is Phase 3
For companies	B2B landing page, the primary sales funnel equivalent to Kinex's dedicated funnel subdomain	Value proposition for HR buyers, reporting/participation insights explainer, case study or testimonial, comparison to "why not just a generic wellness app"	Book a walkthrough	MVP
For individuals	B2C landing page (Phase 3, once a paid tier exists)	Individual pricing, trial offer, FAQ	Start free trial	Phase 3
Resources	Currently just an anchor link; needs to be real	Short articles/guides distinct from or shared with the CYA blog	Newsletter signup	Phase 2
Member login / portal	Core functional gap, currently doesn't exist	Live session links/calendar, on-demand video library, downloadable resources, simple participation history for the logged-in user	N/A	Phase 2 (see Section 7)

Page	Purpose	Key content blocks	Primary CTA	Priority
Company admin view	For an HR buyer to see their organisation's aggregate participation	Simple dashboard: sessions run, attendance trend, top content, no individual-level health data	N/A	Phase 3, coordinate with the strategic report's reporting recommendation
FAQ	Reduce sales friction	Practical questions (how do employees join, what devices, how is data handled)	N/A	MVP
Privacy policy / Terms	Legal, more important here than on the CYA site given accounts and any survey data	Explicit statement on what participation/wellbeing data is collected and how it is used	N/A	MVP

6. Forms, CRM and lead management

Current state: three different, disconnected mechanisms exist across the two sites (native Squarespace form, a separate HubSpot form, and WS's own unclear client-side form handler). This fragments lead tracking and creates the inconsistent-CTA problem noted in Section 2.1.

Requirement: standardise on a single CRM/forms backend used by every form on both sites.

- If the client already has HubSpot usage (confirmed on the current [/online-wellbeing](#) page), the simplest path is to consolidate everything into HubSpot forms and pipelines, rather than introducing a second CRM.
- Every form (general enquiry, package quote request, partner enquiry, facilitator application, WS demo request, WS trial signup) should post to the same CRM instance with a distinct form/pipeline identifier, so leads can be filtered and routed by type and by source site (CYA vs WS).
- Tag every lead with source site and source page so the client can see which property and page is generating enquiries.
- Confirm with the client what happens after a form submission today (who receives notifications, what the follow-up process is) and replicate/improve that workflow rather than assuming a fully automated sequence is wanted.

7. Membership, login and content delivery for WS

This is the most significant new capability required and should be scoped as its own workstream.

Functional requirements:

- Account creation and login for individual members (initially provisioned by their employer/HR admin, later self-serve for the B2C tier).
- Access control: a logged-out visitor sees marketing pages and a limited preview; a logged-in member sees the full on-demand library and live-session links; an HR admin sees their organisation's aggregate view only (no individual health/participation data exposed at the individual level to the employer, this matters for trust and for privacy compliance).
- Video hosting for the on-demand library (a dedicated video platform such as Vimeo or Mux is strongly preferable to self-hosting for bandwidth, security and analytics reasons).
- Live session delivery: the current product description references a single Microsoft Teams link; confirm whether this remains the mechanism or whether a dedicated webinar/streaming tool is wanted for a more polished, branded experience at scale.
- A lightweight participation record per user (sessions attended, content viewed) as the foundation for the reporting feature and for the pulse-survey work described in the strategic report.

Build vs buy decision point for the developer: rather than building a bespoke membership/auth system from scratch, evaluate off-the-shelf membership platforms (for example Memberstack, Outseta or Memberful) that can sit in front of a marketing site built in most modern frameworks, versus a fully custom build using a headless CMS plus a standard auth provider (e.g. Clerk, Auth0, or Supabase Auth) plus Stripe for payment when the paid individual tier launches. The right choice depends on the client's ongoing technical resourcing, an off-the-shelf platform is faster to launch and easier for a non-developer to manage day-to-day; a custom build is more flexible long-term and avoids a recurring third-party platform fee, but requires ongoing developer involvement to maintain.

8. Content and trust requirements

8.1 Client logo and testimonial audit (blocking task, do before content migration)

Every client logo and testimonial currently on corporateyoga.com.au must be checked against these questions before being carried into the new site:

1. Is this a genuine, current or recent client?
2. Do we have explicit permission to display their logo and/or quote them?
3. Does the quote's attribution (name, role, company) match the correct logo?

Do not simply migrate the existing logo wall and testimonial set as-is; Section 2.1 documents specific mismatches and unverifiable entries found in the current site.

8.2 Case studies

Build a repeatable case-study content type (not one-off custom pages) so new ones are cheap to add later. Minimum fields: client name and logo, sector, the problem, what CYA delivered, the outcome (even simple, honest, qualitative outcomes are more valuable than no outcome data at all), a quote, and permission-to-publish sign-off tracked internally (even just a checkbox/date in the CMS, so the client can see at a glance what's cleared for use).

8.3 Reviews and social proof

Build a reviews/testimonial display component now, even though there isn't yet a populated review base to show. This should be able to pull from, or at minimum easily display, Google Business reviews once the client begins actively requesting them (a recommendation in the accompanying strategic report). Do not hard-code testimonials directly into page templates; store them as structured content so they can be swapped, added to, and reused across both CYA and WS without a developer edit each time.

8.4 Accreditation and insurance

Add a simple, reusable "trust badges" component (accreditation logos, a stated public liability insurance figure once confirmed by the client) that can appear in the footer of every page on both sites.

9. Technical and platform recommendations

9.1 Rendering strategy

WS's current pure client-side React/Vite build is a meaningful reason it isn't indexed by Google: search engines and link-preview tools generally need to see real content in the initial HTML response, not content that only appears after JavaScript executes. For the rebuild, use a framework that supports server-side rendering or static generation for all public marketing pages (for example Next.js, Astro, Remix, or a well-configured Nuxt build), reserving client-side-only rendering for genuinely interactive, logged-in areas like the member portal.

9.2 CMS approach

Recommend a content model where non-technical staff (Debby, and Glenn for content work) can edit copy, add blog posts, add case studies, and update pricing without a developer. Two reasonable paths:

- **Squarespace, continued and expanded**, if ease of day-to-day editing and lower ongoing developer overhead matter more than deep customisation. Workable for CYA's

marketing site; less suited to WS's login/membership requirements, which would likely need a separate, purpose-built member area regardless.

- **A headless CMS (e.g. Sanity, Contentful, or Storyblok) feeding a custom-coded front end**, if long-term flexibility, design control, and a genuinely shared design system across both CYA and WS matter more. This is the stronger option if WS's membership functionality (Section 7) is being custom-built anyway, since it avoids maintaining two completely different technical stacks for two related products.

Given WS already exists as a React codebase, and given the membership/login requirement in Section 7 will need custom development regardless of what CYA's marketing site runs on, the most maintainable long-term path is likely a shared headless-CMS-plus-custom-front-end approach for both properties, but this should be weighed against budget and how much ongoing developer support the client expects to retain.

9.3 SEO requirements

- Every page on both sites needs a unique, accurate `<title>` and meta description, currently entirely absent on WS and generic/repetitive on parts of CYA.
- Fix the `/services` redirect issue and retire or properly resolve the password-gated duplicate landing page (Section 2.1) before launch, both are the kind of duplicate/thin-content issue that actively hurts search visibility.
- Submit both sites' XML sitemaps to Google Search Console at launch; WS in particular needs to be indexed from a standing start.
- Add structured data: `Organization` schema for both sites, `LocalBusiness` where relevant given the national in-person delivery model, `FAQPage` schema on FAQ content, and `Review` / `AggregateRating` schema once a genuine review base exists (do not fabricate ratings to enable this markup early).
- Plan 301 redirects from every existing indexed CYA URL to its new equivalent, to preserve whatever existing search ranking the current site holds. This does not apply to WS, which has no indexed pages to preserve.

9.4 Analytics and tracking

- Implement GA4 on both properties, ideally under a structure that lets the client see combined and per-property reporting.
- Define conversion events for every primary CTA (enquiry submitted, demo requested, calendar downloaded, case study viewed, etc.) so marketing effectiveness can actually be measured, something neither current site supports.
- Agree a UTM convention for campaign tracking before launch.
- Connect Google Search Console for both properties.

9.5 Performance and accessibility

- Target Core Web Vitals “Good” thresholds; the current heavy use of large, apparently unoptimised images across the Squarespace site (visible in page weight during the audit) should be addressed with proper image compression and responsive image delivery in the rebuild.
- Build to WCAG 2.1 AA as a baseline: correct alt text on all images (this also directly fixes the mislabelled logo alt-text issue noted in Section 2.1), sufficient colour contrast, keyboard-navigable forms and menus, and properly labelled form fields.
- Test on real mobile devices, not just browser device emulation, given a large share of HR/office-manager visitors will likely be on mobile when first encountering the site via a shared link or social post.

9.6 Data privacy and compliance

- Both sites collect personal information (name, work email, company) via forms; WS’s future member accounts and pulse-survey feature (referenced in the strategic report) will collect participation and self-reported wellbeing data, which warrants a clearly written privacy policy explaining what is collected, why, and who can see it (particularly that individual-level wellbeing responses are not exposed to an employer, only aggregate data, see Section 7).
- Add a cookie consent mechanism appropriate to Australian Privacy Act requirements if any tracking or marketing cookies are used.
- Confirm data storage location/provider requirements with the client if this becomes relevant for any future government-sector clients (Section 4, Partner pathway).

10. Phased build plan

Phase 1: Foundation (technical debt and architecture)

Fix the broken/duplicate URLs, consolidate forms onto one CRM, build the cross-linking between CYA and WS, complete the client-logo and testimonial audit, add accreditation/insurance display, resolve all content inconsistencies (founding date, membership cadence naming), and get both sites onto a crawlable, properly tagged technical foundation (meta tags, sitemap, redirects). This phase should ship before any paid marketing spend increases, since it fixes the credibility and discoverability issues most likely to undermine that spend.

Phase 2: Content and conversion build-out

Build the case-study template and publish 2–3 real case studies; build named/tiered packages with entry-level pricing; build out WS’s instructor bios, pricing and “for companies” funnel page; add the Partner and Facilitator pages; establish the blog/content cadence on both sites; add the reviews component and begin populating it.

Phase 3: Membership platform and reporting

Build the WS login/member portal, on-demand video delivery, and the lightweight participation record; launch the B2C individual pricing tier; build the simple company-level participation dashboard. This phase depends on Phase 1 and 2 being live and stable, and should be scoped in detail with the client once the underlying business decisions (pricing, what “reporting” actually includes) are confirmed, rather than assumed by the developer.

11. Pre-launch QA checklist

- ☐ Full link audit on both sites, no broken or redirect-loop links
 - ☐ Every form tested end-to-end, including confirming it reaches the CRM and triggers the expected notification
 - ☐ Every client logo and testimonial verified and permission-confirmed with the client (Section 8.1)
 - ☐ Mobile responsiveness checked on real devices across at least three breakpoints
 - ☐ Cross-browser check (Chrome, Safari, Edge, Firefox, plus iOS Safari and Android Chrome)
 - ☐ Accessibility audit run (e.g. axe or WAVE) with no critical issues outstanding
 - ☐ Lighthouse/Core Web Vitals check on key pages (home, service pages, WS home)
 - ☐ Meta title and description present and accurate on every page
 - ☐ XML sitemap generated and submitted to Search Console for both properties
 - ☐ 301 redirect map from all existing indexed CYA URLs to new equivalents, tested
 - ☐ Analytics and conversion tracking verified firing correctly on all key CTAs
 - ☐ Privacy policy and terms reviewed and published, reflecting any new data collection
 - ☐ Cookie consent mechanism live if required
 - ☐ Content proofread for consistency (a single founding date, a single description of the membership cadence, consistent use of UK or Australian English spelling throughout)
 - ☐ Client sign-off obtained specifically on all case studies, testimonials and logos before go-live
-

12. Open questions for the client before build starts

These are decisions the developer should not make unilaterally; they need input from Debby and/or Glenn before work begins on the relevant section.

1. What is the correct, single founding date for Corporate Yoga Australia? (Section 2.1)
2. What is the current, correct live-session schedule and duration for the Online Wellbeing membership? (Section 2.1)
3. Which of the currently displayed client logos are genuine, current, and cleared for use? (Section 8.1)
4. What CMS/ongoing editing model does the client want, an easier-to-edit platform like Squarespace, or a more flexible but more developer-dependent headless CMS build? (Section 9.2)
5. Is there a target launch date or budget ceiling that should shape how much of Sections 7 and 9.2 (membership platform, headless CMS) is attempted in the first release versus deferred to Phase 3?
6. Does the client have a preference between HubSpot and another CRM as the single forms/lead backend? (Section 6)
7. What actual liability insurance figure and accreditation credentials should be displayed? (Section 8.4)

This brief should be read alongside the accompanying strategic analysis document, which covers the market positioning, competitive rationale and content strategy behind several of the recommendations here (particularly the case-study, pricing-transparency and reporting/measurement requirements). Where this brief and that report differ on a detail, treat this document as the technical build reference and the strategic report as the “why.”
